DAY 3 - API INTEGRATION AND DATA MIGRATION:

FAQs Option 3: Can we manually add data to Sanity instead of using migration scripts? Yes, you can manually add data to Sanity CMS if you find it easier or if the data size is small. However, learning migration scripting will help you handle larger datasets in the future.

According to FAQs option 3 I created my own schema or products that is mentioned of my DAY 2 Folder I created my own product and category schema and manually added my products into sanity and fetch on Front UI of my products page and

Chef page I created an schema for chefs and manually added chef data. I actually create an API using POST method and to store user input data for example cart data into cart schema and fetch that data using GET method and display on CART page UI.
